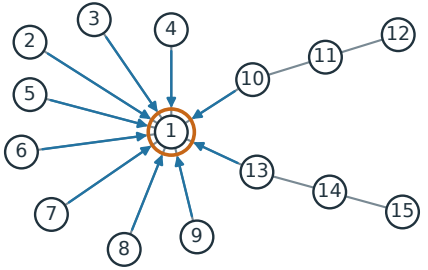
(a) Step 4

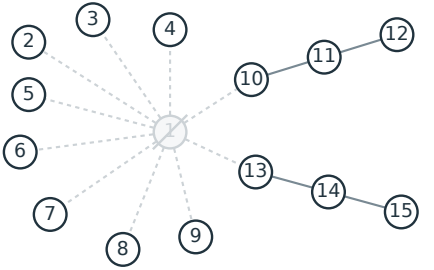
Incoming claims select vertex 1



$\mathrm{cl}_1 = 10$; every other count ≤ 3.

(b) Steps 2-5

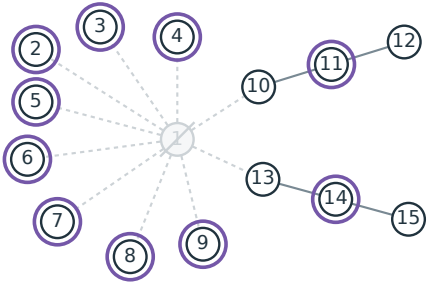
After commit 1: screen again



All degrees ≤ 2; exact rows; $\mathcal{P} = \emptyset$.

(c) Step 6

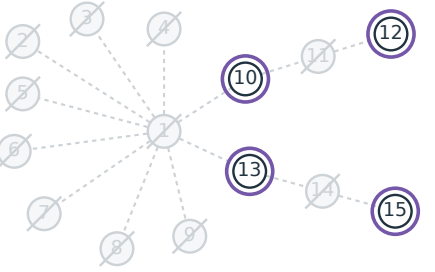
First centroid batch



$B_1 = \{2, \ldots, 9, 11, 14\}$

(d) Step 6

Second centroid batch



$B_2 = \{10, 12, 13, 15\}$

One peel commit + two centroid batches = three commit rounds (not total oracle depth).
